# Working Relationship Between Experts and Users is Flawed

## Users

Consumers

Businesses

## Experts

IT Administrators

System Integrators

Software Developers

### Risks and Frustrations for the User

- Role Confusion
- Disclosure of Confidential Information
- Limited to Providers with a "Trust" Relationship
- No Assurance of "Trust"

### Limitations for the Expert

- Limited Ability to Re-Use Prior Work
- Limited Ability to Re-Use Work of Others
- Monetize Skills by Selling Time-Based Services
- Revenue Potential Capped by Hours

## **Minimize Technical Pre-Requisites for Users**

- Assume that Users are Non-Technical
- Provide a Layer of User Friendliness

## **Initialize and Connect Crippled Computers behind Firewalled Networks**

- Software or Hardware may be Missing, Misconfigured or Broken
- Firewall may Block Inbound Access

## **Productize Technical Knowledge so that it Can Be Re-Used**

- Re-Use of Procedures by Other Experts
- Experts License Technical Knowledge – Instead of Delivering Time-Based Services
- Automate Deployment into Different User Environments

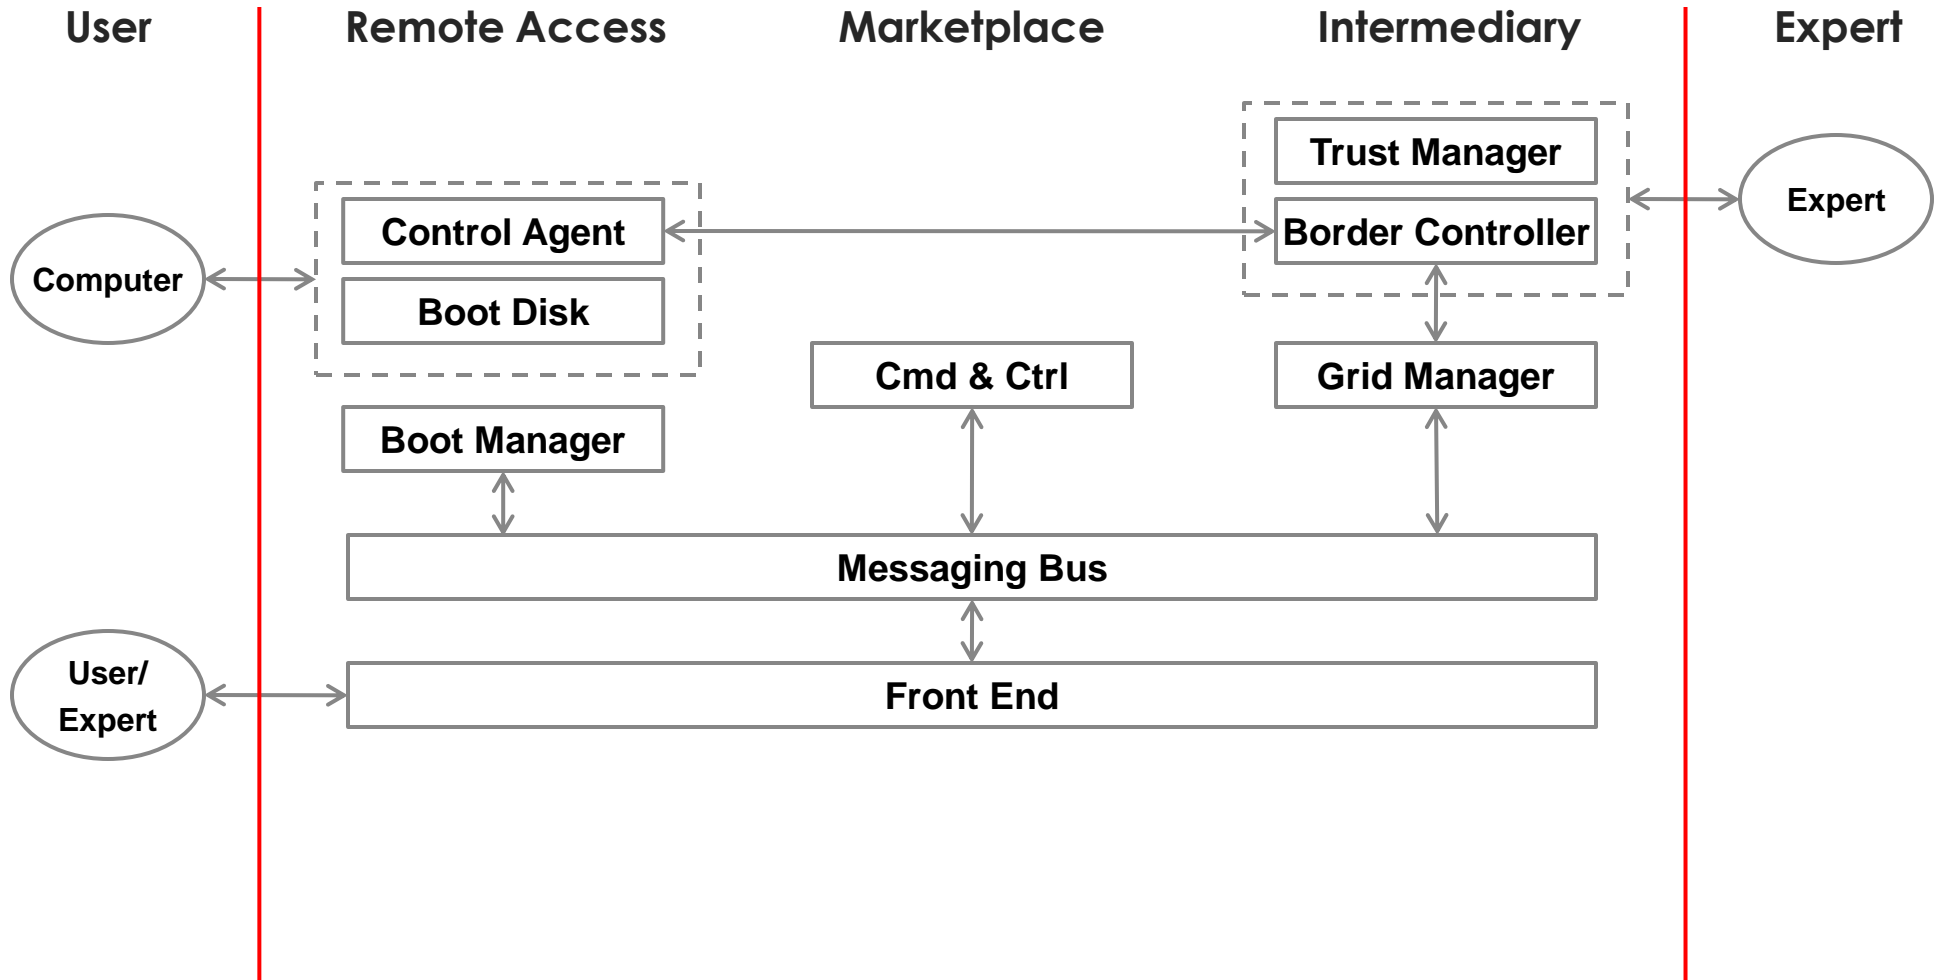

## **Separate Roles and Responsibilities into Users and Experts**

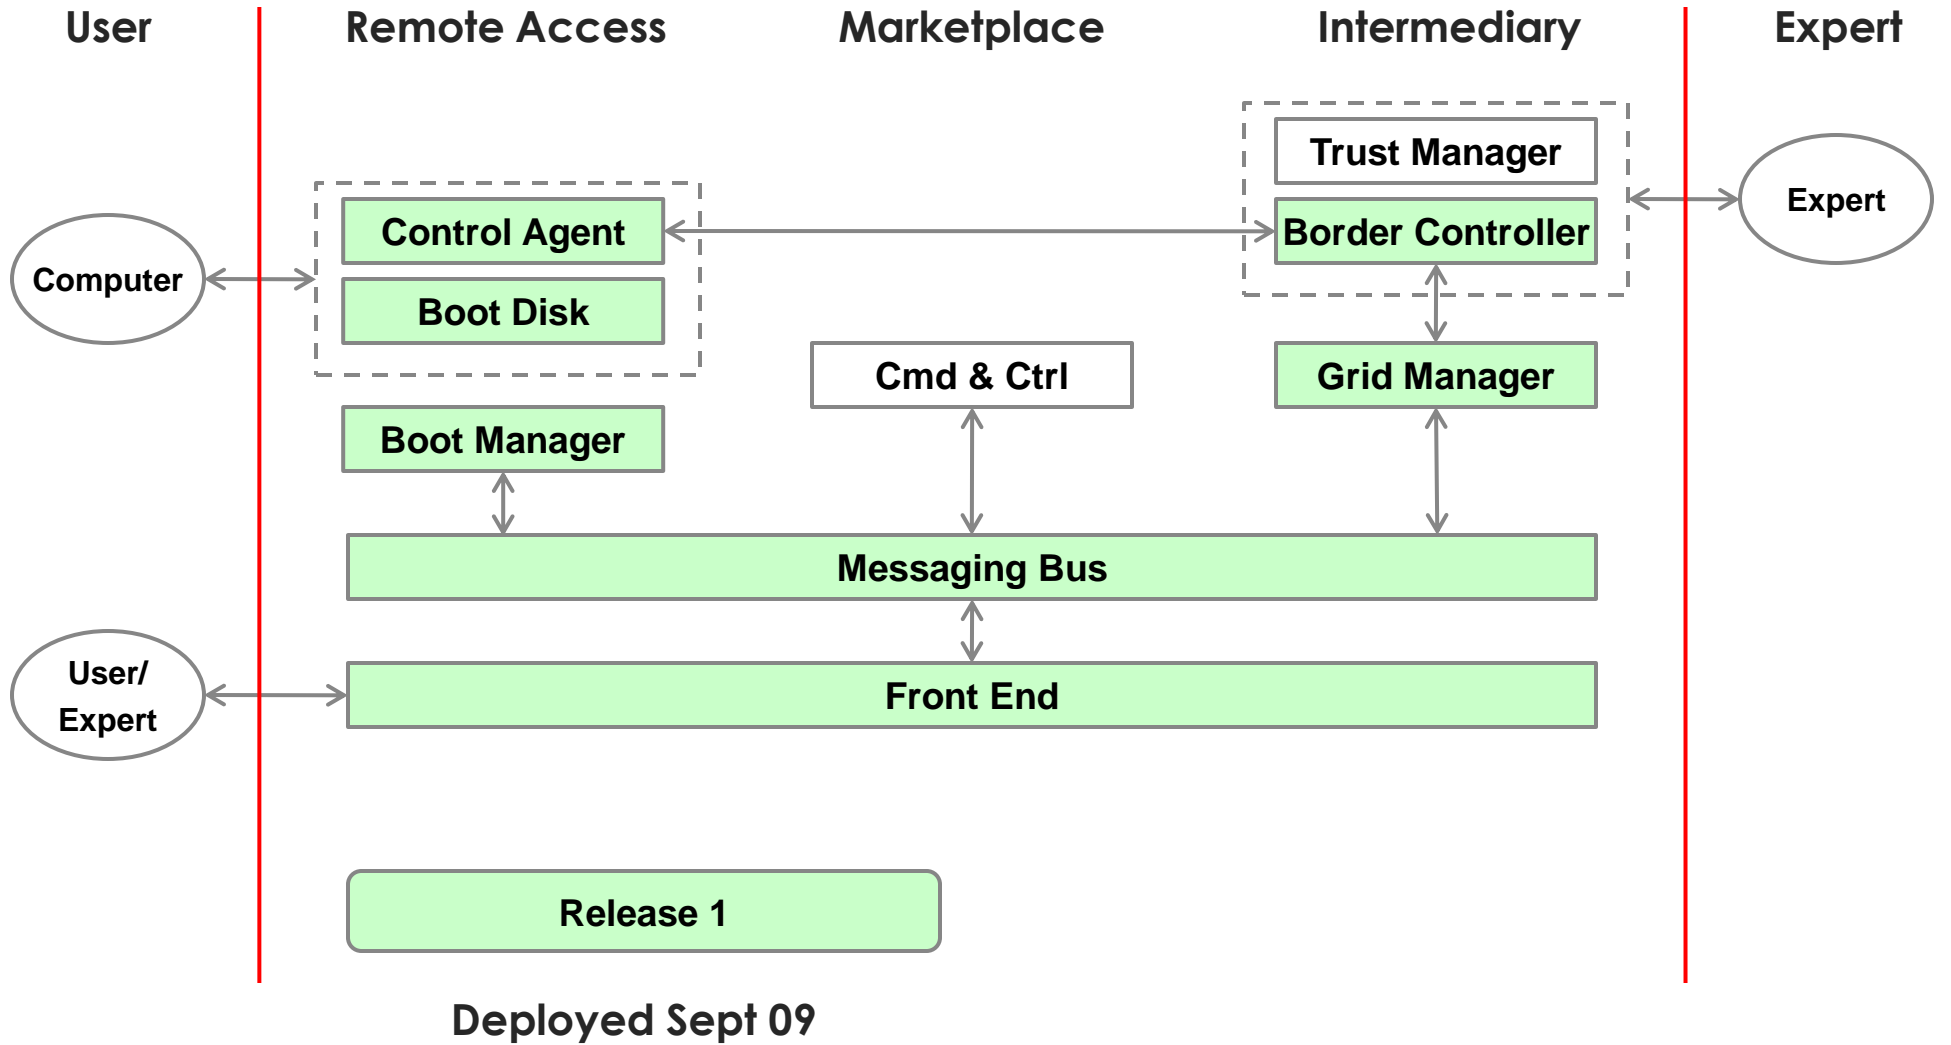

- Experts take Actions and Deliver Technical Services Without Knowing User's Confidential Info
- Users Maintain their Own Confidential Information and Don't Disclose this to Expert

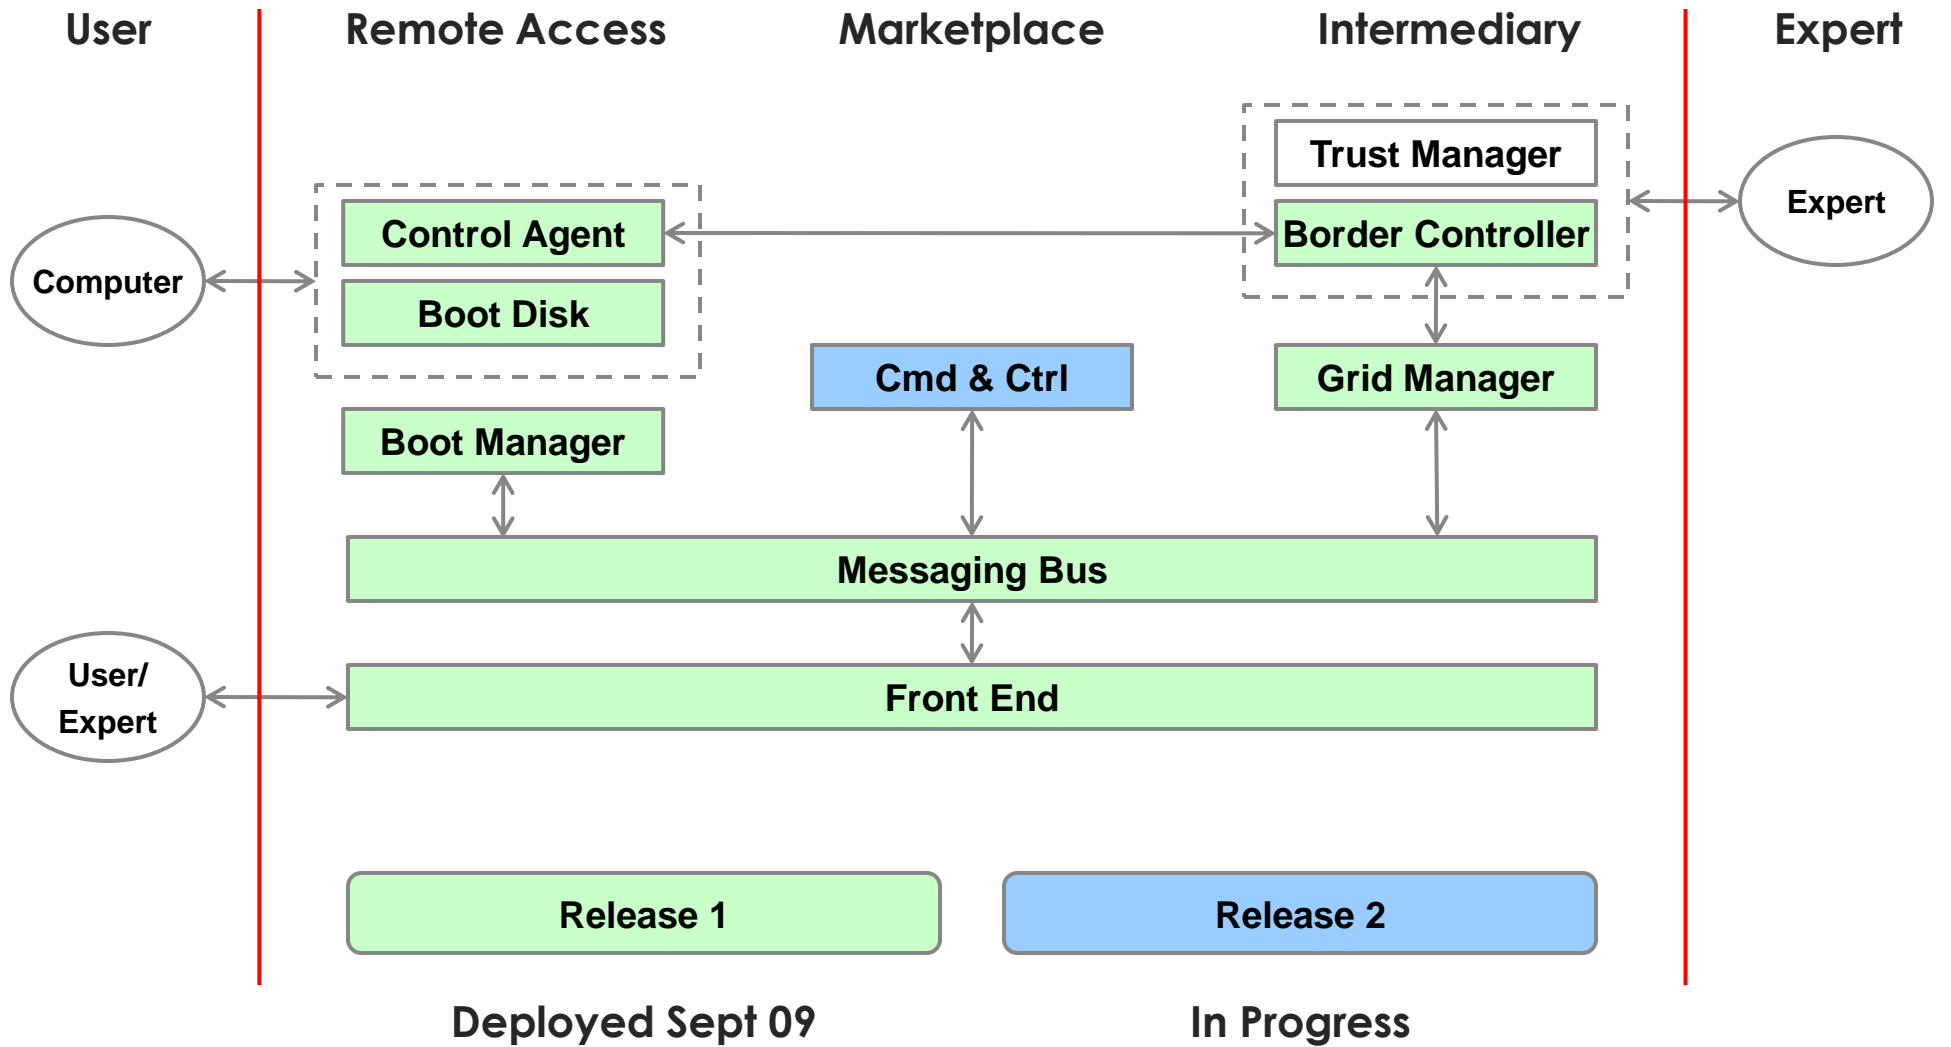

## **Work-Product Delivered is "Trusted"**

- Expert May Not be Able to Establish a Traditional "Trust" Relationship
- Peer Reviewed
- Fully Documented

## **Business Model**

- Users have Free Tool to Diagnose Hardware, Software and Network Issues
- Expert Subscribes to Platform and Receives Referrals to Users with Pre-Screened Technical Needs

## **Channel Development in Progress**

- ASP Service in Market-A
- Platform License in Market-B

## **“Bread and Butter” Type of Business**

- Solves existing problems for Users and Experts
- Problems occur frequently
- Experts and Users willing to pay for a solution
- Good revenue opportunity

## **Competitive Advantage over Current Methods**

- Competing products and services take a “sunny day” approach

## **Strategic**

- Solves a “chicken and egg” problem that exists in Release 2

*From Technical Experts who Know How to Install, Configure and Integrate Software*

*To Business Users with the Same Technical Requirements but Different Computing Environments*

## **Parameterized Commands**

- User Maintains Confidential Information
- Expert Never Needs to Know this Confidential Information

## **Different Individuals Develop Different Elements**

- Expert Focus on their Specialty
- Elements Re-Used by other Experts

## **Elements are Combined into a Larger Solution**

- Stack of Elements Comprise a Larger Solution

## **Deployed Automatically to Users with Same Technical Requirements**

- Users Provide Site-Specific and Confidential Information Necessary to Complete the Element

## **Patent Pending Approach**

## **Business Model**

- Marketplace for the Sale of Technical Knowledge

## **Competitors Exist**

- Automation Tools, Systems and Approaches Exist but have a Flawed Approach

## **Existing Tools and Competitors Don't Solve Core Problems**

- No separation between Expert and User
- Automation tools are still applied by Expert using time-based delivery of services

## Jon Jaroker

- Background: Engineering and Business
- Funding SOFins development for 1.5 years

## Distributed Development Team

- Java Developers
- C++
- QA Testing
- IT Admin

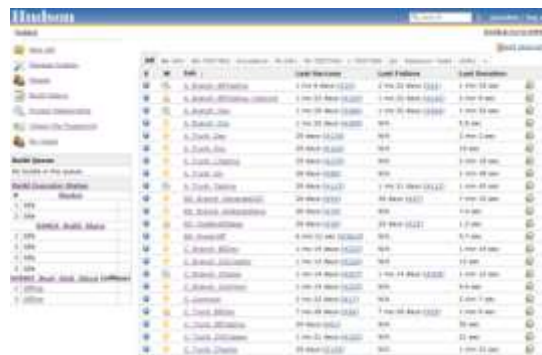

## Agile Development Approach

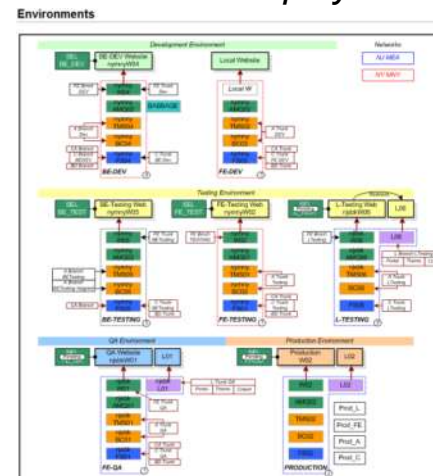

### Iterative Development

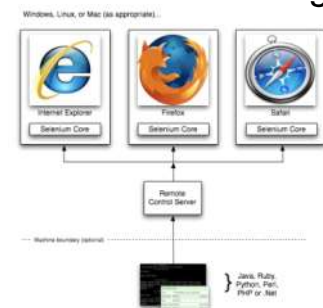

### Continuous Build

### Automated Deployment

### Continuous Functional Testing

*SOFIns is developing a New Way to Deliver IT Services and Software  
from Technical Experts to Non-Technical Users*

## **Business**

- Robust, Quick and Simple Method to Access Remote Computers
- Marketplace for Technical Knowledge that is Automatically Deployed to Remote Computers

## **Technology**

- Network-Based Platform
- “Expert System” Feature Set
- Patent Pending

## **Venture**

- Commercialization in Progress
- Existing Development Operations
- Expanding the Founding Team

**An Expert Repairing a  
Computer Has full Access  
to Confidential Information**

**THE WALL STREET JOURNAL.**

**'Sexy Photo Gate' Mesmerizes Hong Kong, China**

By GEOFFREY A. FOWLER and JONATHAN CHENG

HONG KONG -- If Chinese heartthrob Edison Chen really did take 1,300 photos of himself in compromising positions with a dozen or so starlets, it was a bad idea.

The photos appear to have been stolen from Mr. Chen's pink Apple MacBook after he brought it to a Hong Kong repair shop. Police arrested several people who had posted the images online, and charged one 23-year-old repairman with accessing a computer with criminal or dishonest intent. Hong Kong law forbids publishing obscene or indecent material -- stolen or otherwise -- in

**Stolen Data Spur Tax Probes**

*Ex-Staffer of Bank In Liechtenstein Offered Information*

By MIKE ESTERL, GLENN R. SIMPSON and DAVID CRAWFORD

A sweeping tax-evasion probe roiling Germany and threatening to spread to other countries was sparked by bank client data allegedly stolen by a former Liechtenstein bank employee now believed to be in Australia, according to authorities in the small alpine principality.

Heinrich Kieber, a former employee of Liechtenstein's largest bank, LGT Group, has offered confidential client data to tax authorities on several continents over the past 18 months, including the U.S., according to a person familiar with the matter. Such disclosures could
